

VMware

VMware (NYSE:VMW), the industry-leading virtualization software company, empowers organizations to innovate and thrive by streamlining IT operations. By virtualizing infrastructure—from the data center to the cloud to mobile devices—VMware enables IT to deliver services from any device, anytime, anywhere.

About CPSBU

VMware's Cloud Strategy and the Cloud Provider Software Business Unit's goal is to enable a Multi-Cloud, Multi-Device World where seamless delivery of cloud services to end customers across a global network of heterogeneous clouds and endpoints is a reality. Cloud Service Providers (SPs) play a crucial role in this world. The Cloud Provider Software Business Unit's (CPSBU) mission is to develop technology which, along with VMware's market leading private cloud technologies, enable SPs to deliver the heterogeneous clouds and services of tomorrow.

Cloud Provider Software Business Unit

Our team is building various management portals and services for VMware Cloud Provider Software group. We build our products with cutting-edge technologies and frameworks, and keep code as clean and easy maintainable as possible. We believe this ensures high work efficiency and deliverables with good quality. We also collaborate closely with PMs & Peer teams, through the full software development lifecycle, from design to test to release.

We are searching great talents to join us to continue our growth and success.

Responsibilities:

- Participate in the design, implementation, documentation of system architecture initiatives and full product development life cycles.
- Lead the innovation, proof of concept, R&D of the product development and integration.
- Collaborate with project team members and cross functional product teams to execute product goals.

Requirements:

Job Description

Backend Software Engineer, CPSBU

- 7+ years of experience in developing distributed, multi-tier enterprise / SaaS applications with solid record.
- Deep understanding in layered web application design and development, including REST API, web security, caching, messaging and data persistence.
- Familiar with Java programming. Spring experience is a big plus.
- Experience with enterprise management / storage / virtualization design and implementation is a big plus.
- Excellent communication skills and analytical skills.
- Degree in computer science or equivalent, masters' degree in computer science or a PhD preferred.
